Closets built from one simple tower

How to plan yours in three steps, and every part we make.

Rendering of a closet drawn in our design tool

Corner closet, two walls

The corner walk-in

Oak towers, white drawers and a light in every side panel. Two walls and a corner, with nothing wasted.

Built from

Wall 1

- F Drawers 24″
- A Long hanging 24″
- G Shelves 18″
- J Corner shelves

Wall 2

- F Drawers 24″
- B Double hanging 30″

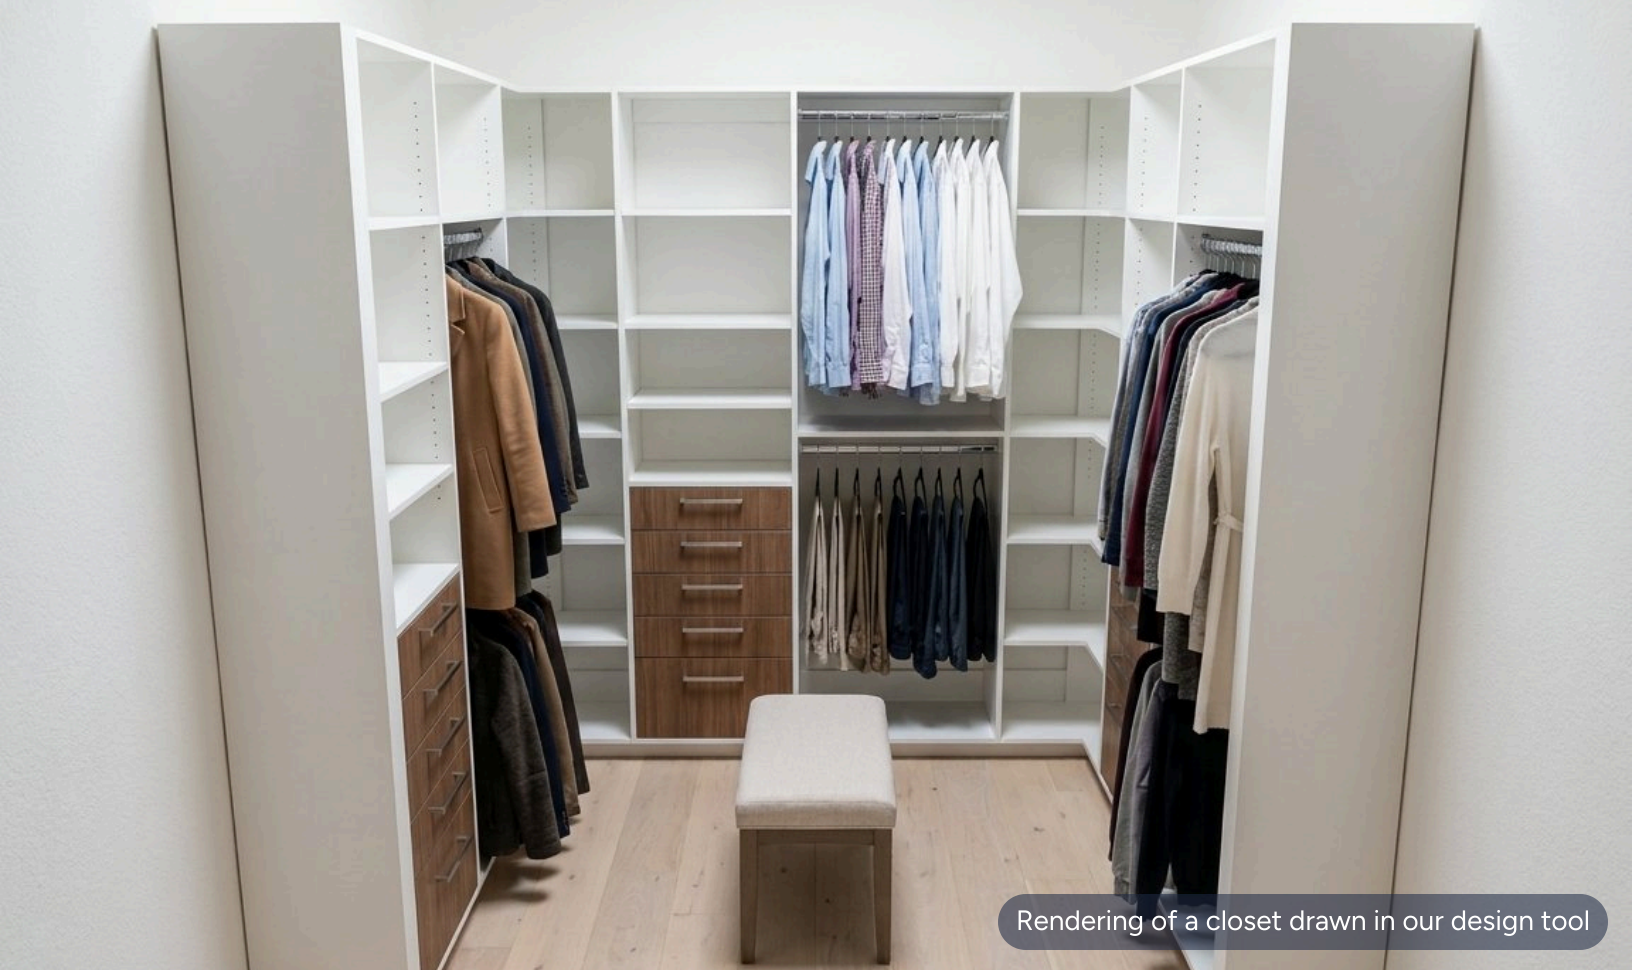

Colors

- Oak towers
- Matte White drawers

Size

96″ + 84″ of wall, 15″ deep, 95 5/8″ tall. Lighted side panels.

> Plan one like it on page 18. Letters are the towers on pages 11–13.

Size

54″ of wall, 24″ deep, 95 5/8″ tall.

> Plan one like it on page 18. Letters are the towers on pages 11–13.

A closet made of towers

Each of our closets is a row of tall units we call towers. Every tower is the same simple box. What you put inside it — rods, shelves, drawers — decides what it holds.

1

Measure and pick a shape

One wall, two, three, or just a wardrobe. Page 7.

2

Pick a tower for what you own

Long clothes, shirts, shoes, folded things. Page 11.

3

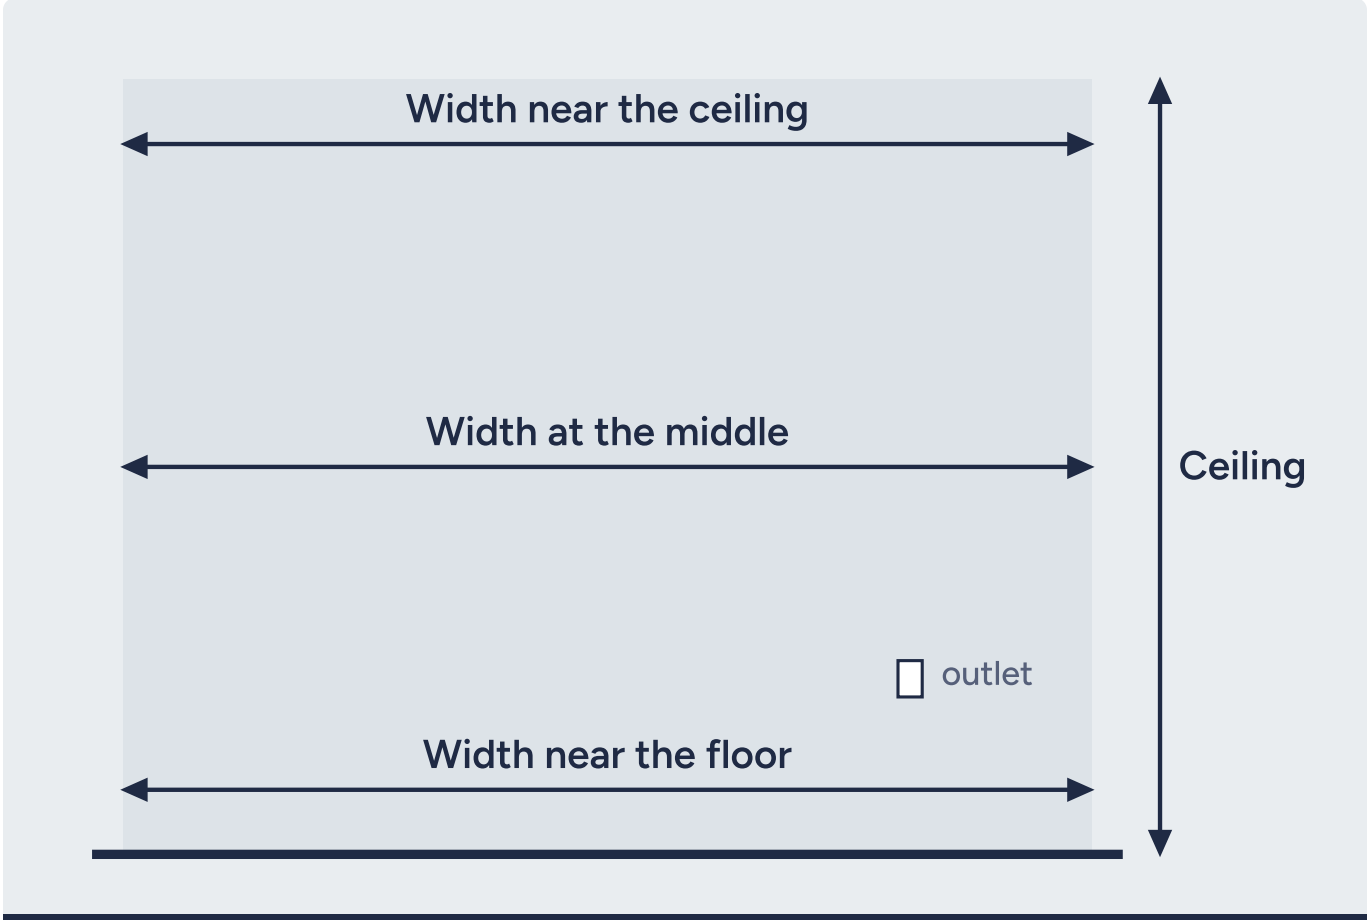

Pick your colors

A tower color and a drawer color. Page 14.

> Plan it yourself on page 18, or skip to the last page, send us the wall, and we will plan it for you.

Measure your wall

Walls are rarely straight, so measure the width three times and use the smallest number. Then the ceiling height. Note anything on the wall: outlets, switches, windows, a vent.

Towers come in four widths

18″, 24″, 30″ and 36″. We mix them to fill your wall, then close the last few inches at each end with a thin filler strip cut to fit. You never need to find an exact size.

Send a photo too

Stand back and photograph the whole wall straight on. It shows us the door, the trim and the floor — things a tape measure misses.

How deep, and how tall

Depth is how far the towers come out from the wall. A clothes hanger is about 17″ wide, so depth decides what hangs well.

12″ deep

Too shallow to hang; shelves only

15″ deep

Clothes stick out 5 1/2″

18″ deep

Clothes stick out 2 1/2″

24″ deep

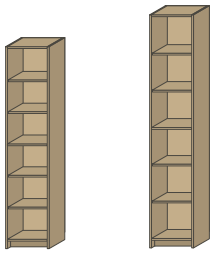

Clothes fit inside

Seen from above. The dark line is the wall; the blue bar is a hanger on the rod.

Most people choose 15″

Hangs clothes, takes drawers and every accessory, and leaves the most floor to walk on. Choose 24″ for a wardrobe-style closet; choose 12″ only for shelves, like a linen closet. Keep one depth per wall so the fronts line up.

Two heights

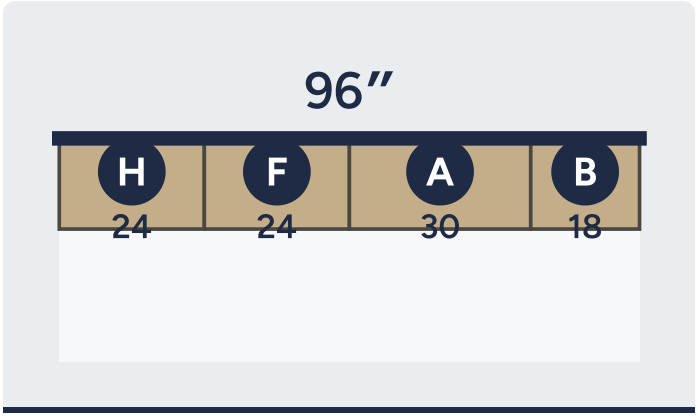

83 5/8″ 95 5/8″

83 5/8″ for ceilings up to 95″.
95 5/8″ for an 8-foot ceiling or higher. A cover plate closes the gap to the ceiling. Every tower in one room is the same height, so the shelves line up across the wall.

Pick your closet shape

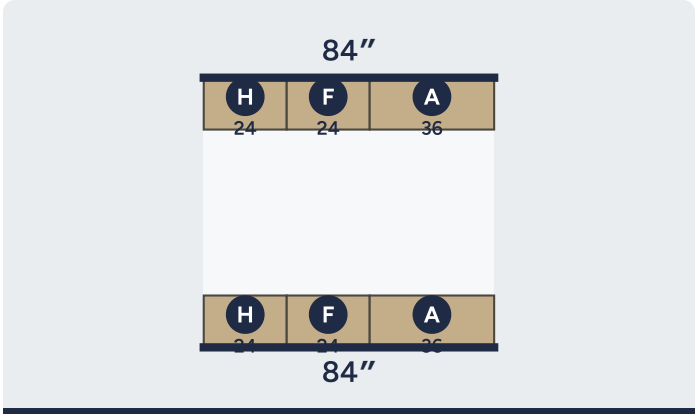

Seen from above, with the tower letters from the next pages.

One wall

A reach-in behind closet doors, or one wall of a bedroom.

Planner: one row.

Two facing walls

Towers on two walls that face each other, with room to walk between. The room needs to be at least 78″ wide.

Planner: two rows, no corner.

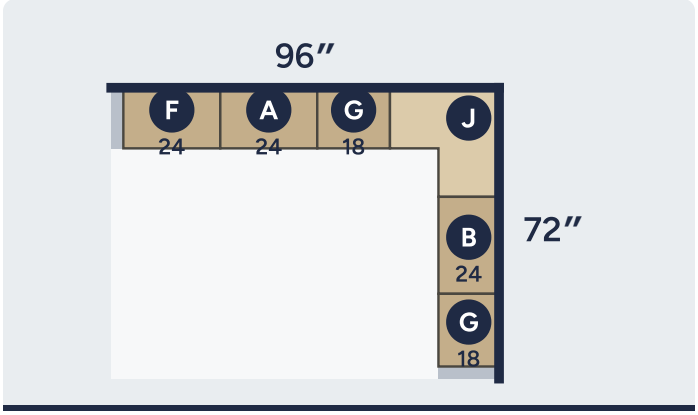

Just a wardrobe

One or two towers on any wall, 24″ deep so the clothes stay inside. Open at the front and fastened to the wall.

Planner: one row. This one is F 24 + A 30.

Shapes with corners

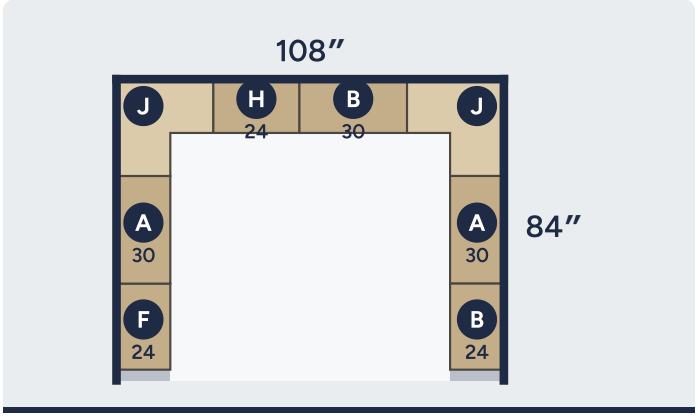

Where two walls of towers meet, a corner tower joins them. You choose what goes inside it.

Corner closet: two walls

Towers on two walls that meet. A corner tower joins them; it takes 27″ along each wall.

Planner: take 27″ off each wall, fill two rows, pick the corner.

Three walls

A walk-in with towers on three sides and a corner tower at each back corner. The room needs to be at least 78″ wide.

Planner: take 27″ off each side wall and 54″ off the back wall, fill three rows, pick both corners.

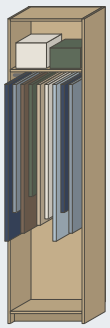

You choose every corner

Shelves, one rod or two rods: see page 13. A corner takes 27″ along each wall with 15″ towers, 36″ with 24″ towers.

Not sure which shape you have? Send us a photo of the room.

For things you hang

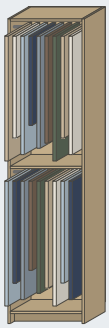

Pick by what is in your closet now. Long things need long hanging; most shirts and jackets fit twice as many on a double rod.

Ⓐ Long hanging

Coats, dresses and long robes. A shelf on top for folded things.

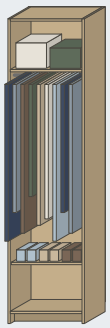

18″, 24″, 30″ and 36″ wide

Ⓑ Double hanging

Two rods, one above the other. Shirts, jackets, skirts, folded trousers.

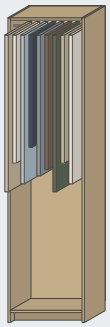

18″, 24″, 30″ and 36″ wide

Ⓒ Long hanging over shoes

Long clothes above, a low shelf below for shoes or boxes.

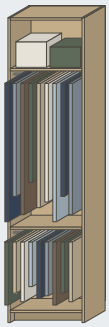

18″, 24″, 30″ and 36″ wide

Ⓓ Tall hanging

One rod and nothing else. Gowns, overcoats, anything floor-length.

18″, 24″, 30″ and 36″ wide

Ⓔ Double hanging with shelves

Two rods, with a shelf over each. Shirts on top, trousers below.

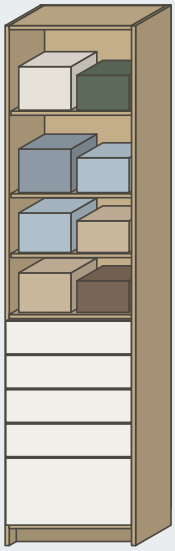

18″, 24″, 30″ and 36″ wide

Rule of thumb

Give each adult about one long tower and one double tower. The rest can be drawers and shelves.

For things you fold

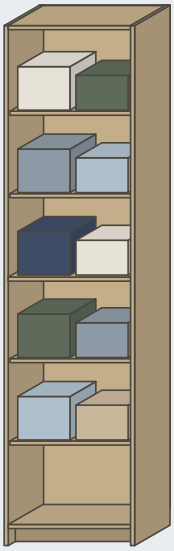

Drawers hide things; shelves show them. Most closets want one drawer tower, centered where you dress.

F Drawers

Socks, underwear, workout clothes, anything you would rather not see.

18″ and 24″ wide
15″, 18″, 24″ deep

G Shelves

Sweaters, jeans, bags and bins. Shelves move to fit.

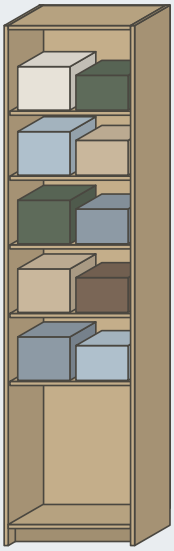

18″ and 24″ wide

H Shoes and shelves

Shoes along the bottom, shelves above for boots and bags.

18″ and 24″ wide
slanted rows in 15″ towers

I Shelves over open floor

Shelves up high, the floor left clear for a hamper, suitcase or boots.

18″ and 24″ wide

Shelves move

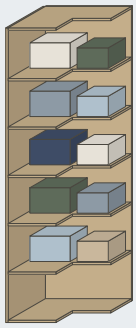

Shelves sit on small pins and lift out. Move them any time without tools. One shelf in the middle stays fixed — it holds the tower square.

Shelves line up

In every tower the shelves sit on the same five heights, so they read as one straight line across the wall.

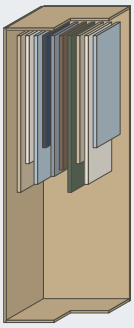

Corners

Where two walls of towers meet, a corner tower turns the corner so no space is wasted. It takes 27″ along each wall (36″ with 24″ towers). Choose what goes inside it.

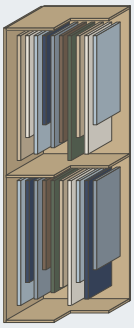

J Corner shelves

L-shaped shelves on the same heights as the towers beside it. Folded clothes, bags, shoes.

K Corner hanging

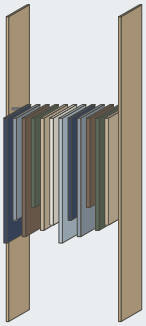

One rod along the back wall. Long coats and dresses.

L Corner double hanging

Two rods with a shelf between. Shirts and jackets.

Hanging corners need towers at least 15″ deep.

Open rod

A rod between two towers with no tower around it. Lighter and more open. We add these when we draw your closet. Over 42″ we add a partition in the middle so the rod never sags.

Pick a tower color and a drawer color

Towers come in white and oak. Drawer fronts come in 5 colors. Any front goes on any tower.

White tower

Oak tower

> Screens and printers change color. Ask for free samples before you decide.

Extras

Lights in the side panels

An LED strip built into the tower sides lights the clothes, not your eyes. It replaces a normal side panel, so it can be added to any tower. One power kit runs the whole closet.

Accessories

Small fittings that slide out from a tower. They need a tower at least 14″ deep; the hamper needs 20″.

On the side of a tower

Pull-out valet rod Slides out to hang tomorrow's outfit.

Pull-out tie rack Holds about 25 ties.

Pull-out belt rack Seven hooks.

Pull-out mirror Full length; slides out and turns.

Under a shelf

Pull-out pants rack Trousers hang folded over bars.

Jewelry drawer Shallow, velvet-lined, under a shelf.

In a drawer tower

Wire basket, 7″ tall On slides, in place of a drawer.

Wire basket, 11″ tall On slides, in place of a drawer.

Pull-out hamper Laundry basket with a cloth bag.

In place of a rod

Pull-down rod Brings a high rod down to your hand, then back up.

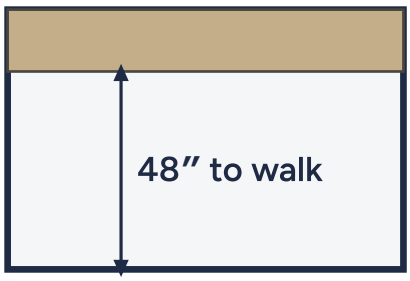

Room you need

Towers take 15″ from the wall. You need room in front to stand, and to open a drawer. One drawing for each shape on page 9.

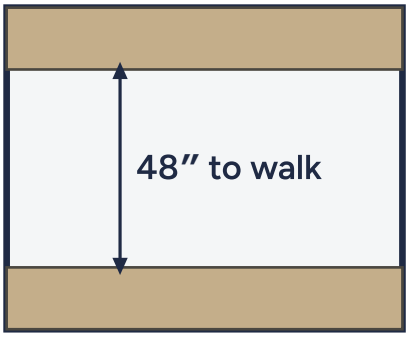

One wall, reach-in

A wall at least 48″ wide. Doors open, towers behind.

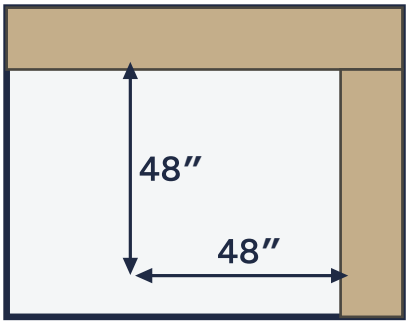

One wall, walk-in

48″ clear in front of the towers.

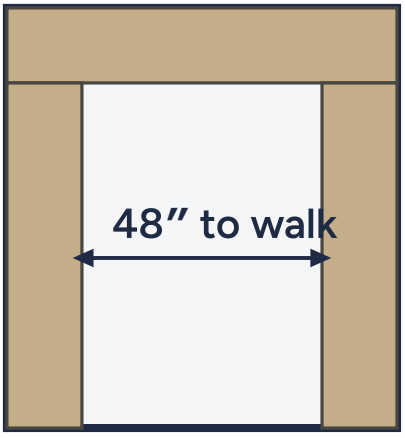

Two facing walls

A room at least 78″ wide.

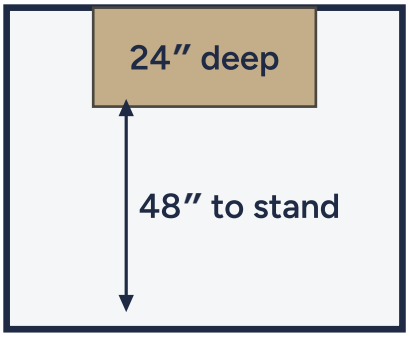

Corner closet: two walls

48″ clear in front of both walls of towers.

Three walls

At least 78″ between the side walls.

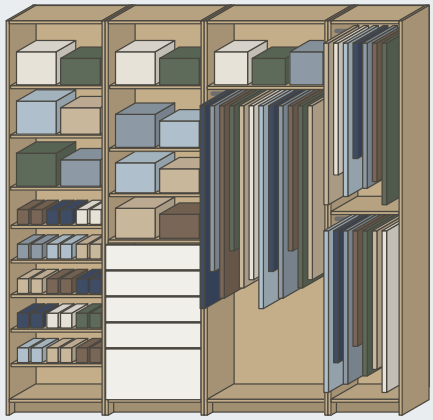

Just a wardrobe

24″ from the wall, and 48″ in front to stand.

> A drawer tower needs 48″ in front of it: the drawer pulled out, and you behind it. In a reach-in, put the drawers where the door opening is, not behind the wall beside it.

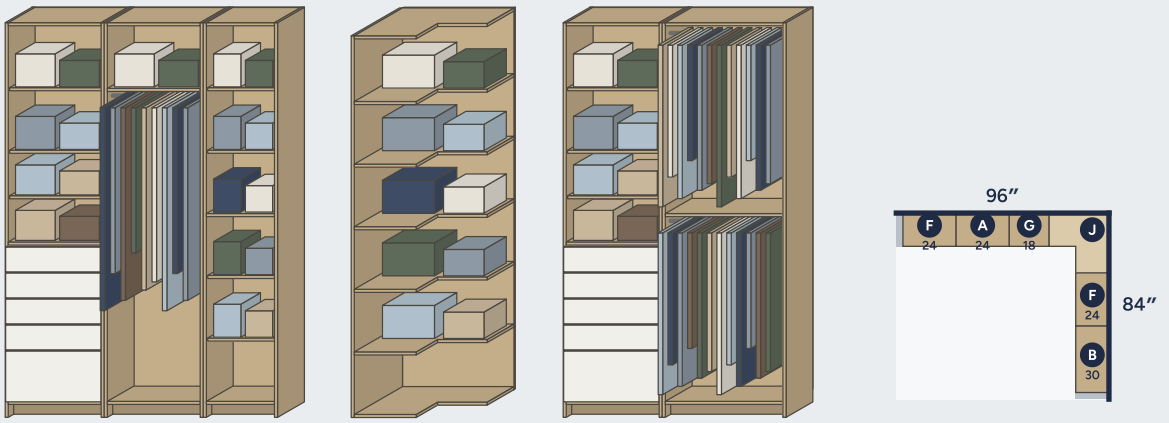

Two closets we drew

Real output from our design tool. Send us your wall and you get the same: a drawing, a 3D view, a parts list and a price.

Reach-in, one 96″ wall

Shoes and shelves 24″, Drawers 24″, Long hanging 30″, Double hanging 18″

Walk-in, 96″ and 84″ walls with a corner

Drawn unfolded: wall 1, the corner, then wall 2, as you would see them turning on the spot. Wall 1: Drawers 24″, Long hanging 24″, Shelves 18″. Corner: J, corner shelves. Wall 2: Drawers 24″, Double hanging 30″.

Plan your closet

1. On the next page, write each wall's width.
2. For each tower, choose what goes there and its width. These are your choices.
3. Add up each wall. Keep it at or under the wall, minus 27″ for each corner.

A **Long hanging**
18–36″

B **Double hanging**
18–36″

C **Long hanging over shoes**
18–36″

D **Tall hanging**
18–36″

E **Double hanging with shelves**
18–36″

F **Drawers**
18″ and 24″

G **Shelves**
18″ and 24″

H **Shoes and shelves**
18″ and 24″

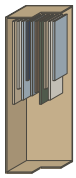

I **Shelves over open floor**
18″ and 24″

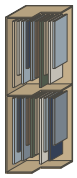

Corners

J **Corner shelves**
27″ each way

K **Corner hanging**
27″ each way

L **Corner double hanging**
27″ each way

> Example, one 96″ wall (page 17): H 24 + F 24 + A 30 + B 18 = 96. A corner closet on a 96″ and a 72″ wall: towers up to 69″ on wall 1, a corner, towers up to 45″ on wall 2.

Your plan

Fill this in on a computer, or print it and write. One row per wall, towers left to right as you face it. They must add up to no more than the wall, minus 27″ per corner. Tower pictures: page 18. Walls 2 and 3 are on the next page.

Example: one 96″ wall, filled in

Tower 1
Shoes and shelves (H)
24″

+

Tower 2
Drawers (F)
24″

+

Tower 3
Long hanging (A)
30″

+

Tower 4
Double hanging (B)
18″

= 96″
fits a 96″ wall

What goes here? ____ Width ____

Tower 6

What goes here? ____ Width ____

Parts and codes

You don’t need these to order: they are here so you can read our quote. A code is the part plus its size: **LX-B-2415-T** is a tower 24″ wide, 15″ deep, in the tall height.

Part	Code	Example	Sizes
Tower	LX-B-WD-H	LX-B-2415-T	18″, 24″, 30″ and 36″ wide; 12″, 15″, 18″ and 24″ deep; height S or T
Corner	LX-CN-D-H	LX-CN-15-T	12″, 15″, 18″ and 24″ deep; S or T
Shelf	LX-SH-WD	LX-SH-2415	every tower size
Shoe shelf, slanted	LX-SS-W	LX-SS-24	24″, 30″ and 36″ wide, 15″ towers
Drawer, low	LX-DL-WD	LX-DL-2415	front 6 1/8″ tall; 15″, 18″ and 24″ deep towers
Drawer, high	LX-DH-WD	LX-DH-2415	front 12 1/2″ tall
Rod	LX-RD-W	LX-RD-24	cut to fit the tower
Top cover plate	LX-TC-WD	LX-TC-2415	one per tower, closes to the ceiling
Back panel	LX-BP-W-H	LX-BP-24-T	1/4″ thick, optional
Filler strip	LX-FIL-W-H	LX-FIL-3-T	1 1/2″, 3″ and 6″ wide, cut on site
Lighted side panels	LX-SPL-D-H	LX-SPL-15-T	plus one LX-LED-KIT per closet
Open rod parts	LX-RDS-72, LX-RF	LX-RDS-72	rod cut to the gap, a flange at each end
Partition	LX-PP-D-H	LX-PP-24-T	holds up a long open rod
Accessories	Maker’s code	RAS-CVR-14-CR	listed by the maker’s own code

W width, **D** depth, **H** height (S = 83 5/8″, T = 95 5/8″).

What every tower is made of

3/4″ particleboard, finished on both sides, every visible edge banded. Shelves span at most 36″, rods 42″, so nothing bows.

What we do not make

Doors, glass, islands, rotating shoe racks, or towers under 18″ wide. Drawer fronts are flat.

Send us your wall

Fill this in, add a photo of the wall, and send it to us. We reply with a drawing and a price.

Name _____ Phone or email _____ Address of the closet _____

Your wall

Width near ceiling _____ Width at middle _____

Width near floor _____ Ceiling height _____

What you want to store

Skip this if you filled in the planner.

- ☐ Long coats and dresses
- ☐ Shirts and jackets
- ☐ Folded clothes
- ☐ Shoes, about how many pairs?
